

Project Executable Files

Date	03 July 2026
Team ID	XXXXXX
Project Name	Smart Lender – Loan Eligibility Prediction Using Machine Learning
Maximum Marks	3 Marks

Project Executable Files

This section contains all executable and deployable files required for the **Smart Lender – Loan Eligibility Prediction Using Machine Learning** project. The project is organized into separate folders for dataset, model training, Flask application, frontend resources, screenshots, and deployment files. The evaluator can run the application locally or access the deployed application using the provided Render URL.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Smart-Lender-Loan-Eligibility-Prediction/

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smart-lender-loan-eligibility-prediction-8448.onrender.com
Login Credentials (Demo)	Not Applicable
Platform / Hosting Provider	Render (Python Web Service)
Repository Link	https://github.com/CHANDRASAI9491/Smart-Lender-Loan-Eligibility-Prediction
Demo Video Link	https://drive.google.com/file/d/1vQt5JWImK6AjpRLzCWL68gxi6XZfPPzT/view?usp=drive link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the GitHub repository.

git clone <https://github.com/CHANDRASAI9491/Smart-Lender-Loan-Eligibility-Prediction.git>

2. Open the project folder using Visual Studio Code or any Python IDE.

3. Install the required dependencies.

pip install -r requirements.txt

4. Navigate to the Flask application directory.

cd flask

5. Run the Flask application.

python app.py

6. Open the application in your web browser.

<http://127.0.0.1:5000>

7. Enter the applicant details.

8. Click the Predict button.

9. View the loan eligibility prediction result.

Deployment on Render

Platform :
Render (Python Web Service)

Root Directory :
flask

Build Command :
pip install -r ../requirements.txt

Start Command :
gunicorn app:app

Live Application URL :
<https://smart-lender-loan-eligibility-prediction-8448.onrender.com>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The deployed application may take 30–60 seconds to load after being idle because the free Render service automatically suspends inactive applications.	Wait for the application to wake up and refresh the page.
2	The machine learning model is trained on a static dataset and may not reflect future changes in loan applicant behavior.	Retrain the model periodically with updated datasets to improve prediction accuracy.
3	The application currently does not include user authentication, database integration, or prediction history storage.	These features can be implemented in future versions to improve security, scalability, and user experience.
